DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 3 and 4 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Pickard (US Patent No. 3,120,282).

Pickard discloses a wireline core bit comprising water swivel 20; drill rod 10; core barrel 37; inner tube 30; overshot assembly 125 that "is hydraulically propelled towards the core barrel inner tube assembly which is to be withdrawn" (col. 10, lines 49-50); drill chuck 17 to grab and rotate the drill string. Water swivel 20 has ports to receive fluid from tubular 22 and to provide fluid to tubular 21.

In reference to claim 4, Pickard discloses mechanism 122 to withdraw inner tube 30 from said drill rod.

Response to Arguments

Applicant's arguments filed 4/30/2008 have been fully considered but they are not persuasive.

Applicant argues that Pickard does not disclose the overshot assembly 125 being disposed at an intermediate position between upper supply port 25 and the lower supply port. Fig. 2 shows overshot 125 lowered into a well to interact with core barrel 37. While not explicitly shown, before overshot 125 is lowered into the well it would

inherently have to be at the top of the well and would at that time be disposed at an intermediate position between the fluid supply port 25 and the lower fluid supply port.
